

Course Information Document: Undergraduate

For students starting in Academic Year 2017/2018

1. Course Summary

Names of programme(s) and award title(s)	BSc (Hons) Geology BSc (Hons) Geology with International Year (see Annex A for details)
Award type	Dual Honours/Major/Minor <i>NB: all students who study a science Principal subject are candidates for the degree of Bachelor of Science (with Honours) (BSc Hons) irrespective of their second Principal subject.</i>
Mode of study	Full time
Framework of Higher Education Qualification (FHEQ) level of final award	Level 6
Duration	3 years 4 years with International Year
Location of study	Keele University – main campus
Accreditation (if applicable)	Major route BSc Geology and Dual Honours BSc Geology combined with a science subject (including Physical Geography) are accredited by the Geological Society of London. For further details see section 12
Regulator	Higher Education Funding Council for England (HEFCE)
Tuition Fees	<p>UK/EU students: Fee for 2017/18 is £9,250*</p> <p>International students: Fee for 2017/18 is £14,150** (if combined with a non-laboratory-based Principal Subject) or £15,250** (if combined with another laboratory-based Principal Subject)</p> <p>The fee for the international year abroad is calculated at 15% of the standard year fee</p>
Additional Costs	Refer to section 16

* These fees are regulated by Government. We reserve the right to increase fees in subsequent years of study in response to changes in government policy and/or changes to the law. If permitted by such change in policy or law, we may increase your fees by an inflationary amount or such other measure as required by government policy or the law. Please refer to the accompanying Student Terms & Conditions. Further information on fees can be found at <http://www.keele.ac.uk/studentfunding/tuitionfees/>

** We reserve the right to increase fees in subsequent years of study by an inflationary amount. Please refer to the accompanying Student Terms & Conditions for full details. Further information on fees can be found at <http://www.keele.ac.uk/studentfunding/tuitionfees/>

How this information might change: Please read the important information at <http://www.keele.ac.uk/student-agreement/>. This explains how and why we may need to make changes to the information provided in this document and to help you understand how we will communicate with you if this happens.

2. What is a Dual Honours programme?

Dual Honours degrees are degrees that are taken in two different subjects, resulting in an *X and Y* degree title, for example *Geology and Physical Geography*. If you are taking a Dual Honours programme, these will be the two subjects you applied for. These are referred to as your Principal Subjects.

In a Dual Honours degree you must take at least 120 credits in each Principal Subject, accrued over all three levels of study, with at least 30 credits in Year 1 (Level 4) and at least 45 credits in each of Years 2 and 3 (Levels 5 and 6) in each of two Principal Subjects. The remaining available credits can be filled with modules from these subjects or other subjects entirely.

What is a Major/Minor programme?

Major/Minor degrees are degrees that are taken in two different subjects, much like a Dual Honours degree, except that you will specialise in the Major subject. In a Major/Minor degree you will need at least 225 credits in your Major subject over your three years of study with at least two modules (30 credits) taken each year in your Major Subject, although some Principal Subjects will require you to take more than this and this will be stated in the relevant programme specification. You will also need 90 credits in your Minor subject with a minimum of 30 credits (two modules) taken in Year 1 (Level 4) and 45 credits (three modules) taken in Year 2 (Level 5).

Students taking the Minor Route in Geology might not necessarily be able to demonstrate that they have achieved all of the Programme's learning outcomes.

3. Overview of the Programme

Geology is a fascinating subject that investigates how the Earth was formed, how life arose and evolved, why the Earth looks like it does today, what resources it contains and how we can find them.

Our industrial society is based on the work of geologists in the hunt for natural resources such as oil, gas, coal, minerals, metals, aggregates and water. If it hasn't been grown, then a geologist has discovered it. This means that future job opportunities for geologists are excellent as society develops increasing needs for these resources.

Geology draws on knowledge from many different aspects of science such as chemistry, biology, and physics as well as other subjects such as geography, environmental studies and economics.

As such Geology is the ideal subject to choose as part of a dual honours degree programme. We will teach you many employability skills that are valuable for everyday work not only in geology, but also in many fields of employment after you graduate.

4. Aims of the Programme

The broad aims of the programme are:

- To provide a detailed understanding of geology and allied subject within the earth sciences.
- To provide a broad-based introduction to Geology at Level 4 that does not require previous knowledge of geology/geosciences topics, and to utilise the material covered at Level 4 to lay the foundations for detailed study of geological concepts at Levels 5 & 6.
- To provide an understanding of the structure and composition of the Earth and other planets.
- To provide an integrated approach to understanding the present and past interactions between the physical, chemical and biological processes operating in the Earth's core, mantle, crust, and surface.

- To provide an appreciation of the history of the Earth over geological time scales
- To promote an awareness of the dual context of the subject in society, as well as providing knowledge and understanding of both the exploitation and the conservation of the Earth's resources.
- To provide an appreciation of the scientific fundamentals in the geosciences and an adequate knowledge base for a career in research or industry.
- To emphasise the development of field, laboratory, presentational, writing and information technology skills to prepare graduates for independent work in their professional careers.
- To provide a fully integrated fieldwork programme, including overseas field courses.
- To provide appropriate monitoring schemes and feedback for students on their progress.
- To provide a wide choice of subject options and all-round education via an established Dual Honours and Major-Minor scheme.

5. What you will learn

The intended learning outcomes of the programme (what students should know, understand and be able to do at the end of the programme), can be described under the following headings:

- Subject knowledge and understanding
- Subject specific skills
- Intellectual skills
- Key or transferable skills (including employability skills)

Subject knowledge and understanding

Successful students will be able to demonstrate knowledge and understanding of:

- the terminology, nomenclature and classification of rocks, minerals, fossils and geological structures
- geological processes and how they integrate to shape the natural world at different temporal and spatial scales
- the structure and composition of the Earth and other planets
- geological time, including the principles of stratigraphy, the stratigraphic column, dating techniques, rates of Earth processes and major events in Earth history
- the evolution of life on Earth as revealed by the fossil record
- major geoscience paradigms, including Uniformitarianism, the extent of geological time and Plate Tectonics
- the need for both a multi-disciplinary and interdisciplinary approach to the development of knowledge in the geosciences
- the different components of the Earth System and how they interact to change the physical world and their impact on society
- different methods used in the observation, analysis, interpretation and representation of geological and geophysical information
- how the geology of a field study area can be used to illustrate and deepen understanding of the geological evolution of a wider region
- modern environments and processes, and use of this knowledge to interpret aspects of the geological record
- issues concerning the exploration, availability and sustainability of natural resources
- geological aspects of human impacts on the physical environment
- natural hazards and their impacts on society
- applications of Geology to the development of knowledge, wealth creation and improving quality of life

Subject specific skills

Successful students will be able to:

- identify a wide range of igneous, sedimentary and metamorphic rocks, as well as a wide range of minerals, fossils and geological structures
- implement three-dimensional analysis with particular reference to the subsurface distribution and relationships of rocks observed at the surface
- collect and record geological and geophysical information in the field, including the production and interpretation of geological maps
- plan, design and execute an independent piece of project work in the geological sciences, including acquisition and recording of geological data in the field, followed by the processing, interpretation and presentation of this data, and the production of a final report
- make safe and effective use of a range of field equipment commonly used by the geoscience profession and develop an understanding of the scope and limitations of such equipment.
- undertake effective fieldwork with due regard for safety, risk assessment, rights of access, relevant health and safety regulations and sensitivity to the impact of investigations on the environment
- work safely in a scientific laboratory, with awareness of standard methods and procedures and with due regard for risk assessment and relevant health and safety regulations
- prepare effective maps and diagrams using a range of appropriate technologies
- employ a variety of technical and laboratory-based methods for the collection and analysis of geological and geophysical information
- combine and interpret different types of geological and geophysical evidence using quantitative and qualitative approaches
- appreciate the issues of sample selection, accuracy, precision and uncertainty during collection, recording and analysis of geoscience data in the field and laboratory
- use powers of observation, analysis and imagination to make decisions in the light of uncertainty

Intellectual skills

Successful students will be able to:

- recognise and use subject-specific theories, concepts and principles to make reasoned decisions and solve problems
- analyse, synthesise and summarise data and information critically, including prior research
- collect and integrate several lines of evidence to formulate and test hypotheses, and make critical judgements
- apply knowledge and understanding to address familiar and unfamiliar problems
- assess the merits of contrasting theories, explanations and policies
- recognise the moral and ethical issues of investigations and appreciate the need for professional codes of conduct
- develop an adaptable and flexible approach to study and work
- identify and work towards targets for personal, academic and career development
- take responsibility for their own learning and develop a habit of reflection upon that learning

Key or transferable skills (including employability skills)

Successful students will be able to:

- develop and sustain effective approaches to learning and study, including time management, flexibility, creativity and intellectual integrity
- communicate effectively to a variety of audiences in written, verbal and graphical forms
- work with numerical data using appropriate qualitative and quantitative techniques, as well as computer software packages
- work effectively with a variety of types of information technology to analyse and present information and data, as well as solve numerical problems
- use the internet as a means of communication and a source of information
- demonstrate competence in spatial awareness and observation
- conduct field and laboratory studies
- reference work in an appropriate manner

- work with information handling and retrieval systems using data from a wide range of sources
- work effectively both as an individual and as part of a group or team, recognising and respecting the viewpoints of others
- sustain motivation to work towards a goal over an extended period of time
- recognise responsibilities as a local, national and international citizen

6. How is the Programme taught?

Learning and teaching methods used on the programme vary according to the subject matter and level of the module. They include the following:

- Lectures
- Workshops
- Practical classes
- Field courses
- Individual progress interviews, including profiling/personal development planning (PDP)
- Directed reading
- Group presentations and linked discussion
- Independent study and project work
- Use of e-learning/the Keele Learning Environment (KLE)

A module typically comprises two one-hour lectures and a three-hour practical class per week. The directed reading and lecture slides available in advance on the KLE help you prepare for lectures and the practical classes reinforce concepts learned in lectures through problem solving and practical application of geological techniques. Some classes are taught in workshop format integrating both lecture and practical material. Fieldwork provides a deep, immersive learning experience that puts geological processes and their products into their four dimensional context. The independent mapping project provides the opportunity to bring together and demonstrate proficiency in all areas of geology.

Apart from these formal activities, students are also provided with regular opportunities to talk through particular areas of difficulty, and any special learning needs they may have, with their Personal Tutors or module lecturers on a one-to-one basis.

These learning and teaching methods enable students to achieve the learning outcomes of the programme in a variety of ways.

7. Teaching Staff

Currently our core teaching staff members comprises of a number of Professors, Readers, Senior Lecturers, Lecturers and Postdoctoral Teaching Fellows, who between them have expertise and interests in all major areas of earth sciences as well as complementary vocational disciplines such as computing. In addition, members of the Geography and Environmental lecturing staff also contribute to the Geology degree programmes.

All current academic members of staff are active researchers and many have a distinguished track record in publication, the generation of grant income, industrial collaboration and journal editorship. Several staff have particular interests in the development of geoscience education and/or have played an active role in the promotion of UK geoscience activities (e.g. via membership of Geological Society committees). A number of members of staff are Fellows of the Higher Education Academy and one has an MA in Teaching and Learning. Many have professional qualifications such as Fellow of the Geological Society (F.G.S.), Chartered Geologist (C.Geol), European Geologist (EurGeol), Fellow of the Royal Astronomical Society (F.R.A.S.), as well as others. Members of staff have also won both group and individual Keele Teaching and Learning Excellence Awards.

The University will attempt to minimise changes to our core teaching teams, however, delivery of the programme depends on having a sufficient number of staff with the relevant expertise to ensure that the programme is taught to the appropriate academic standard.

Staff turnover, for example where key members of staff leave, fall ill or go on research leave, may result in changes to the programme's content. The University will endeavour to ensure that any impact on students is limited if such changes occur.

8. What is the Structure of the Programme?

The academic year runs from September to June and is divided into two semesters. The number of weeks of teaching will vary from course to course, but you can generally expect to attend scheduled teaching sessions between the end of September and mid-December, and from mid-January to the end of April.

Our degree courses are organised into modules. Each module is usually a self-contained unit of study and each is usually assessed separately with the award of credits on the basis of 1 credit = 10 hours of student effort. An outline of the structure of the programme is provided in the tables below.

There are four types of module delivered as part of this programme. They are:

- Compulsory core module – a module that you are required to study on this course;
- Optional core module – these allow you some limited choice of what to study from a list of modules;
- Programme approved elective module – subject-related modules that count towards the number of subject credits required by your degree;
- Free-standing elective module – a free choice of modules that count towards the overall credit requirement but not the number of subject-related credits.

The Geology programme is modular in structure and must be taken in Levels 4 and 5 in combination with another principal subject. Students may select to study Major or Minor Geology at Level 6, or study M.Geoscience at Levels 6 and 7 (see M.Geoscience Programme Specification for details), or continue with the Dual Honours scheme at Level 6.

Year 1 (Level 4)

It is assumed that students have no previous geological knowledge and therefore the Programme starts from basics. The programme provides a broad-based introduction to geological topics at Levels 4 & 5 with emphasis on the characteristics of rocks, minerals and fossils, together with the processes that govern their formation and development. The way in which rocks are deformed and how geophysics is used to discover the internal structure of the Earth are also studied. The interpretation and construction of geological maps is an essential component of the course. All modules take place over a single semester (12 weeks) and consist of two lectures and one 3-hour practical class per week. In addition, several field courses (see below) and coverage of key/employability skills are embedded within the modules.

Compulsory Core modules	Credits
Introduction to Mineralogy and Petrology (includes fieldwork)	15
Geology: Time and Space (includes fieldwork)	15
Geology: Planet Earth	15
Introduction to Sedimentology and Palaeontology (includes fieldwork)	15

Field Classes (all compulsory):		
Destination	Duration	Aims and Objectives
Natural History Museum, London	1 day	To cover aspects of palaeontology and the curation of specimens via a 'behind the scenes' look at selected parts of the NHM geological collections.
Wenlock Edge, Shropshire	1 day	To cover palaeontology and palaeoecology, and structural measurements.
Ercall Quarries, Shropshire	1 day	To cover lithology identification, measuring structures and introductory geological mapping.

Pembrokeshire, South Wales	7 days, Residential	To cover identification of lithologies, structures, fossils, etc. and make detailed notes/diagrams in field notebooks; sedimentary logging; report writing.
Llangollen, North Wales	2 days	To cover basic geological mapping skills with emphasis on feature mapping techniques; identification of lithologies with emphasis on carbonate sedimentology.

Year 2 (Level 5)

During Level 5 particular attention is paid to first hand observation, recording and interpretation of geological phenomena in the field and laboratory. By the end of the level you will have been given a complete grounding in geology that will allow you to carry out your own independent studies.

Core modules	Credits
Igneous and Metamorphic Petrology (includes fieldwork)	15
Reconstructing Past Environments (includes fieldwork)	15
Advanced Structural Geology and Geological Mapping Training (includes fieldwork)	15
Geoscience Field Techniques (includes fieldwork)	15

Field Classes (all compulsory):		
Destination	Duration	Aims and Objectives
Snowdonia, North Wales	7 days, Residential	To cover all aspects of geological mapping, including aerial photograph interpretation, safety/hazard assessment procedures, report writing, navigation skills, etc.
Almeria, Southern Spain	7 days, Residential	To integrate strands of geology studied at Levels 4 and 5, and relate them to the evolution of a major geotectonic province;
Mam Tor, Peak District	1 day	Sedimentary logging and palaeoenvironmental interpretation (part of module ESC-20002).
Shap, Lake District	1 day	Study of igneous and metamorphic rocks

Year 3 (Level 6)

This year starts during the summer vacation when students carry out an independent field project, which normally takes 3 weeks. During the autumn semester students prepare a dissertation based upon this field project. In addition, there is a choice of option modules/programme approved electives from a wide range of geological subject areas. In addition, Major Geology students can select some Physical Geography option modules. The method and approach to teaching changes emphasis from staff-centred instruction at Levels 4 & 5 to more student-oriented activities, with components of several modules based upon independent or team-based project work.

There is also a change from modules based upon pure aspects of geological study to more applied aspects. It is intended that students should select their option modules according to their interests and career aspirations. Much of the content of these Level 6 option modules is based on research at the forefront of the discipline and helps to strengthen links between teaching and research.

Compulsory Core modules	Credits	Programme Approved Elective modules (Major Geology students can select a maximum of two of the following Physical Geography programme approved electives)	Credits
Independent Fieldwork Project (ISP)	15	Glaciers and Glacial Geomorphology	15
Geological Communication Skills – Major Geology students only	15	Global Environmental Change	15
Volcanic and Magmatic Processes	15	Water Resources	15

(includes fieldwork) Major Geology students only			
		Coastal Environments	15
Optional Core / Programme Approved Elective modules (<i>Dual Honours students select three modules, Major Geology students select five modules</i>):			
Structure and Geodynamics (includes fieldwork)	15		
Natural Hazards	15		
Hydrological and Engineering Geology	15		
Micropalaeontology: Principles and Applications (includes fieldwork)	15		
Economic Geology (includes fieldwork)	15		
Advanced Topics in Sedimentology (includes fieldwork)	15		
Exploration Geophysics for the Hydrocarbon Industry	15		

Field classes:			
Module	Destination	Duration	Aims and Objectives
Independent Fieldwork Project	Various	21 days	To undertake independent geological fieldwork and synthesise the results into a technical report.
Structure and Geodynamics (includes fieldwork)	Watchet, Somerset	2 days, residential	To study extension and inversion tectonics; to collect and analyse structural data; aerial photograph mapping and structural analysis.
Micropalaeontology: Principles and Applications (includes fieldwork)	Dee Estuary	1 day	To collect micropalaeontology specimens for SEM and TEM analysis.
Economic Geology (includes fieldwork)	Ecton Mine	1 day	To study ore body formation, and mining and production methods.
Volcanic and Magmatic Processes (major route only)	Southern Italy or Greece	10 days, residential	To study igneous and volcanic processes from field evidence.
Advanced Topics in Sedimentology (includes fieldwork)	North-East England	2 days, residential	To investigate the Carboniferous sedimentology and stratigraphy of the northern Pennines.

For further information on the content of modules currently offered please visit:

www.keele.ac.uk/recordsandexams/az

9. Final and intermediate awards

Credits required for each level of academic award are as follows:

Honours Degree	360 credits	<p>You will require at least 120 credits at levels 4, 5 and 6</p> <p>The number of Geology credits you require depends on whether Geology is taken as a Dual or Minor subject.</p> <p>Dual Honours: You will require at least 120 credits in both Geology and your other principal subject (out of 360 credits</p>
-----------------------	-------------	---

		<p>overall), with at least 30 credits in Year 1 (Level 4) and at least 45 credits in each of Years 2 and 3 (Levels 5 and 6) in each of your two Principal Subjects.</p> <p>Major route: You will require at least 225 credits in Geology and at least 90 credits in your other Minor subject over the course of the degree. Students taking Geology as a Major subject must obtain at least 30 credits in Geology in each level of study.</p> <p>Minor route: You will require at least 90 credits in Geology and at least 225 credits in your other Major subject over the course of the degree. Students taking Geology as a Minor subject must obtain at least 30 credits in Geology in Year 1 (level 4) and 45 credits in Geology in Year 2 (level 5).</p>
Diploma in Higher Education	240 credits	You will require at least 120 credits at level 4 or higher and at least 120 credits at level 5 or higher
Certificate in Higher Education	120 credits	You will require at least 120 credits at level 4 or higher

Geology with International Year: in addition to the above students must pass a module covering the international year in order to graduate with a named degree in Geology with International Year. Students who do not complete, or fail the international year, will be transferred to the three-year Geology programme.

10. How is the Programme assessed?

Assessments within the Geology programme are classified into three broad categories:

- **Formative Assessments** take place during the running of each module. These are designed to inform students of their progress in the modules taken. They are not used as a part of students' formal assessment mark for the module
- **Summative Assessments** are used to return a formal assessment mark to Academic Services. They are normally derived from an examination at the end of the module and continuous assessment of course work throughout the module. Summative assessment marks from Levels 5 and 6 count towards the final degree score; the Level 5 marks being weighted half that of Level 6. Performance in these assessments is made known to students each semester and should be discussed with their Personal Tutor
- **Qualifying Assessments** are assessments that have to be passed above a certain threshold mark in order to pass the whole module. These are typically core fieldwork components to a module but may include other vital topics such as understanding of field safety issues

Most of the assessment in Geology is a combination of both formative, to provide you with feedback to improve your skills for later assessments, as well as summative, to contribute towards your overall mark, and some assessments may be qualifying as well. Some of your coursework, however, particularly in the early part of modules, may be formative only to prepare you for later summative work. Some modules are assessed via examinations and coursework, some by a combination of examination, coursework and fieldwork, others by coursework or field work alone.

The wide variety of assessment methods used within Geology at Keele reflects the broad range of knowledge and skills that are developed as you progress through the degree programme. Teaching staff pay particular attention to specifying clear assessment criteria and providing timely, regular and constructive feedback that helps to clarify things you did not understand and helps you to improve your performance. The following list is representative of the variety of assessment methods used within Geology:

- **Unseen closed and open book examinations** in different formats test your knowledge and understanding of the subject. Examinations may consist of essay, short answer and/or multiple choice

questions

- **Technical Reports** allow you to demonstrate your ability to articulate ideas clearly and concisely in a format used in the geological industry. Technical reports also develop and demonstrate research and presentation skills (including appropriate scholarly referencing)
- **Laboratory reports** – structured proformas and full laboratory reports are formal summaries of work carried out in the geological laboratory and test your understanding of the practical aspects of the programme and develop the skills necessary to enable you to present and analyse your results
- **Class tests** taken either in the geological laboratory or online via the Keele Learning Environment (KLE) assess your subject knowledge and your ability to apply it in a more structured and focused way
- **Dissertations** enable you to explore in depth an area of particular interest through a substantial piece of focused research and writing, and demonstrate a deeper understanding of geological issues
- **Field course exercises** allow you to demonstrate your understanding of geological features encountered in the field. This might include the contents of your field notebook, field sketches, geological logs and maps
- **Oral and poster presentations and reports** assess your subject knowledge and understanding and your ability to articulate this orally and graphically. Group work also tests your ability to work effectively as members of a team, and to reflect on these processes as part of your own personal development
- **Literature Syntheses** of other scholars' work test your ability to identify and summarise the key points of a text and to evaluate the quality of arguments and the evidence used to support them. They also help you provide a background context for your research project work
- **Portfolios** may consist of a range of different pieces of work but on a common theme to allow you to demonstrate your knowledge and understanding via a number of different formats

Marks are awarded for summative assessments designed to assess your achievement of learning outcomes. You will also be assessed formatively to enable you to monitor your own progress and to assist staff in identifying and addressing any specific learning needs. Feedback, including guidance on how you can improve the quality of your work, is also provided on all summative assessments within three working weeks of submission, unless there are compelling circumstances that make this impossible, and more informally in the course of tutorial and seminar discussions.

11. Contact Time and Expected Workload

This contact time measure is intended to provide you with an indication of the type of activity you are likely to undertake during this programme. The data is compiled based on module choices and learning patterns of students on similar programmes in previous years. Every effort is made to ensure this data is a realistic representation of what you are likely to experience, but changes to programmes, teaching methods and assessment methods mean this data is representative and not specific.

Undergraduate courses at Keele contain an element of module choice; therefore, individual students will experience a different mix of contact time and assessment types dependent upon their own individual choice of modules. The figures below are an example of activities that a student may expect on your chosen course by year/stage of study. Contact time includes scheduled activities such as: lecture, seminar, tutorial, project supervision, demonstration, practical classes and labs, supervised time in labs/workshop, fieldwork and external visits. The figures are based on 1,200 hours of student effort each year for full-time students.

Activity	Year 1 (Level 4)	Year 2 (Level 5)	Year 3 (Level 6)
Scheduled learning and teaching activities	44%	39%	33%
Guided independent Study	56%	61%	67%

Placements	0%	0%	0%
------------	----	----	----

12. Accreditation

Major route BSc Geology and Dual Honours BSc Geology combined with a science subject (including Physical Geography) are accredited by the Geological Society of London www.geolsoc.org.uk, which is the world's oldest Geoscience society that was founded in 1807 by Royal Charter and is the UK national society for geoscience.

Students who successfully complete an accredited degree course will normally qualify for admission to Fellowship of the Society and for the award of Chartered Geologist status after a specified period of professional development and relevant experience. The courses are due for reaccreditation in 2019.

The Geological Society of London has accredited the Geology Major Route and Dual Honours Geology degrees combined with another science subject (including Physical Geography). Accreditation status was awarded in 2001, followed by successful applications for reaccreditation in 2007 and 2014. The Geological Society, the world's oldest Geoscience Society, was founded in 1807 by Royal Charter and is the UK national society for geoscience. It exists to promote the geosciences and the professional interests of UK geoscientists. The main aim of the accreditation scheme is to ensure that geology/geoscience degree courses are underpinned by well-maintained internal standards that satisfy the academic requirements of Fellowship of the Society and Chartered Geologist status. Students who successfully complete an accredited degree course will normally qualify for admission to Fellowship of the Society and for the award of Chartered Geologist status after a specified period of professional development and relevant experience.

13. Regulations

The University Regulations form the framework for learning, teaching and assessment and other aspects of the student experience. Further information about the University Regulations can be found at: <http://www.keele.ac.uk/student-agreement/>

A student who has completed a semester abroad will not normally be eligible to transfer onto the International Year option.

Geology combined with a science subject as Dual Honours or Major Route has professional accreditation and at this time there are no additional course regulations relating to accreditation. However, should these be required by the regulating body in the future, we might have to add programme regulations to maintain our accreditation. Should this be required we will inform you of any changes at the earliest opportunity.

14. What are the typical admission requirements for the programme?

Subject	A-level	Subjects not included	International Baccalaureate	BTEC	Access to Higher Education Diploma	GCSE requirements
Geology (Dual Honours)	<p>BBC</p> <p>A level Biology, Chemistry, Environmental Science, Geography, Geology, Maths, Physics or related science discipline at grade B or above. A Pass in Science Practical will be required if applicant is taking A level Biology, Chemistry or Physics (England)**</p> <p>** Science practical only required from applicants taking reformed A level</p>	General Studies and Critical Thinking	30 points to include Higher Level Biology, Chemistry, Physics or Geography at 6 or above.	<p>DDM - DMM</p> <p>You must have taken sufficient Science units, please contact us for advice</p>	Obtain Access to Higher Education Diploma with 30 Level 3 credits at Distinction. You must also have taken sufficient Science credits, please contact us for advice.	Maths @ C (or 4) English Lang @ C (or 4)

	Biology, Chemistry or Physics in England.					
--	---	--	--	--	--	--

Applicants who are not currently undertaking any formal study or who have been out of formal education for more than 3 years and are not qualified to A-level or BTEC standard may be offered entry to the University's Foundation Year Programme.

Applicants for whom English is not a first language must provide evidence of a recognised qualification in English language. The minimum score for entry to the Programme is Academic IELTS 6.0 or equivalent.

Please note: All non-native English speaking students are required to undertake a diagnostic English language assessment on arrival at Keele, to determine whether English language support may help them succeed with their studies. An English language module may be compulsory for some students during their first year at Keele.

Accreditation of Prior Learning (APL) is considered on a case-by-case basis and those interested should contact the Programme Director. The University's guidelines on this can be found here:

<http://www.keele.ac.uk/qa/accreditationofpriorlearning/>

15. Other learning opportunities

Study abroad (semester)

Students on the Geology programme have the potential opportunity to spend a semester abroad in their second year studying at one of Keele's international partner universities.

Exactly which countries are available depends on the student's choice of degree subjects. An indicative list of countries is on the website (<http://www.keele.ac.uk/studyabroad/partneruniversities/>); however this does not guarantee the availability of study in a specific country as this is subject to the University's application process for studying abroad.

No additional tuition fees are payable for a single semester studying abroad but students do have to bear the costs of travelling to and from their destination university, accommodation, food and personal costs. Depending on the destination they are studying at additional costs may include visas, study permits, residence permits, and compulsory health checks. Students should expect the total costs of studying abroad to be greater than if they study in the UK, information is made available from the Global Education Team throughout the process, as costs will vary depending on destination

Whilst students are studying abroad any Student Finance eligibility will continue, where applicable students may be eligible for specific travel or disability grants. Students studying in Erasmus+ destinations may be eligible for grants as part of this programme. Students studying outside of this programme may be eligible for income dependent bursaries at Keele.

Students travel on a comprehensive Keele University insurance plan, for which there are currently no additional charges. Some governments and/or universities require additional compulsory health coverage plans; costs for this will be advised during the application process.

Study Abroad (International Year)

A summary of the International Year, which is a potential option for students after completion of year 2 (Level 5), is provided at Annex A.

Other opportunities

Fieldwork

Fieldwork is an essential part of a geologist's training and is intended to supplement and complement formal class teaching and develop the skills of observing and recording. It also establishes professional, social and cultural links outside the institution and develops an external dimension to the School's courses. The Geology

programme includes field excursions to classic geological areas within the British Isles, as well as overseas field courses to enable students to study the evolution of fundamentally different geological regimes. Due to the dual honours structure of Keele, field courses typically have to take place at weekends or during vacation time.

16. Additional costs

Geology Programme Costs

Field Course Costs

There are no charges to students for travel and accommodation taking field courses as a core part of their programme. The University pays for these costs.

All Geology students undertake an independent field project with three-weeks fieldwork carried out during the summer vacation between Levels 5 and 6 (years 2 and 3). Students are responsible for organising their own transport and accommodation as well as paying any costs incurred. These costs are extremely variable as they are dependent on where the student carries out their project. Costs are minimal if the project work is undertaken in the student's local area.

Other Costs

As to be expected there will be additional costs for inter-library loans and potential overdue library fines, print and graduation.

Programme Specification

Annex A for Dual Honours Programmes

Please note: in order to be eligible to take the International Year option your other subject must also offer this option. Please refer to the information published in the course document for your other subject.

International Year Programme
<p>Students registered for Dual Honours Geology may either be admitted for or apply to transfer during their period of study at Level 5 to the Dual Honours programme in both their principal subjects, providing that they meet the progression criteria outlined in this document. Students accepted onto the International Year programme will have an extra year of study at an international partner institution after they have completed Year 2 (Level 5) at Keele.</p> <p>Students who successfully complete both the second year (Level 5) and the International Year will be permitted to progress to Level 6. Students who fail to satisfy the examiners in respect of the International Year will normally revert to the Dual Honours programme without the International Year and progress to Level 6 on that basis. The failure will be recorded on the student's final transcript.</p> <p>Study at Level 4, Level 5 and Level 6 will be as per the main body of this programme specification. The additional detail contained in this annex will pertain solely to students registered for 'Geology with International Year'.</p>
International Year Programme Aims
<p>In addition to the programme aims specified in the main body of the programme specification, the international year programme of study aims to provide students with:</p> <ol style="list-style-type: none">1. Personal development as a student and a researcher with an appreciation of the international dimension of their subject2. Experience of a different culture, academically, professionally and socially
Entry Requirements for the International Year
<p>Students may apply to the 4-year programme during Level 5. Admission to the International Year is subject to successful application, interview and references from appropriate staff.</p> <p>The criteria to be applied are:</p> <ul style="list-style-type: none">• Academic Performance (an average of 60% across all modules at Level 5 is normally required)• General Aptitude (to be demonstrated by application for study abroad, interview during the 2nd semester of year 2 (Level 5), and by recommendation of the student's personal tutor, 1st and 2nd year tutors and programme director)
Student Support
<p>Students will be supported whilst on the International Year via the following methods:</p> <ul style="list-style-type: none">• Phone or Skype conversations with Study Abroad tutors, in line with recommended Personal Tutoring meeting points.• Support from the University's Global Education Team
Learning Outcomes
<p>In addition to the learning outcomes specified in the main text of the Programme Specification, students who complete a Keele undergraduate programme with International Year will be able to:</p> <ol style="list-style-type: none">a. Describe, discuss and reflect upon the cultural and international differences and similarities of different learning environmentsb. Discuss the benefits and challenges of global citizenship and internationalisationc. Explain how their perspective on their academic discipline has been influenced by locating it within

an international setting.

In addition, students who complete 'Geology with International Year' will be able to:

- i) Design, plan and critically evaluate a practical investigation within geology, record relevant information accurately and systematically and be able to reflect upon the data in a critical manner.
- ii) Integrate, apply and develop fundamental geological principles to describe and explain phenomena and solve problems in the context of selected topics within geology.

Please note that students on Dual Honours programmes with International Year must meet the subject-specific learning outcomes for BOTH their principal subjects.

These learning outcomes will all be assessed by the submission of a satisfactory individual learning agreement, the successful completion of assessments at the partner institution and the submission of the reflective portfolio element of the international year module.

Course Regulations

Students registered for the 'Geology with International Year' are subject to the course specific regulations (if any) and the University regulations. In addition, during the International Year, the following regulations will apply:

Students undertaking the International Year must complete 120 credits, which must comprise *at least 40%* in the student's discipline areas.

This may impact on your choice of modules to study, for example you will have to choose certain modules to ensure you have the discipline specific credits required.

Students are barred from studying any Geology module with significant overlap to Level 6 modules to be studied on their return. Significant overlap with Level 5 modules previously studied should also be avoided.

Additional costs for the International Year

Tuition fees for students on the International Year will be charged at 15% of the annual tuition fees for that year of study, as set out in Section 1. The International Year can be included in your Student Finance allocation, to find out more about your personal eligibility see: www.gov.uk

Students will have to bear the costs of travelling to and from their destination university, accommodation, food and personal costs. Depending on the destination they are studying at additional costs may include visas, study permits, residence permits, and compulsory health checks. Students should expect the total costs of studying abroad be greater than if they study in the UK, information is made available from the Global Education Team throughout the process, as costs will vary depending on destination.

Students studying in Erasmus+ destinations may be eligible for grants as part of this programme. Students studying outside of this programme may be eligible income dependent bursaries at Keele.

Students travel on a comprehensive Keele University insurance plan, for which there are currently no additional charges. Some Governments and/or universities require additional compulsory health coverage plans; costs for this will be advised during the application process.
