

Course Information Document: Undergraduate

For Academic Year 2025/26

1. Course Summary

Names of programme and award title(s)	MSci Forensic and Analytical Investigation MSci Forensic and Analytical Investigation with International Year (see Annex for details)
Award type	Single Honours (Masters)
Mode of study	Full-time
Framework of Higher Education Qualification (FHEQ) level of final award	Level 7
Normal length of the programme	4 years; 5 years with the International Year between years 2 and 3
Maximum period of registration	The normal length as specified above plus 3 years
Location of study	Keele Campus
Accreditation (if applicable)	This programme is accredited by the Chartered Society of Forensic Sciences. For further details see the section on Accreditation.
Regulator	Office of Students (OfS)
Tuition Fees	<p>UK students:</p> <p>Fee for 2024/25 is £9,250*</p> <p>International students:</p> <p>Fee for 2024/25 is £20,700**</p> <p>The fee for the international year abroad is calculated at 15% of the standard year fee</p>

Please note this document applies to Level 7 (Year 4) students in 2025/26. Level 4 (Year 1), Level 5 (Year 2) and Level 6 (Year 3) students should refer instead to the Forensic Science (Integrated Masters) document

How this information might change: Please read the important information at <http://www.keele.ac.uk/student-agreement/>. This explains how and why we may need to make changes to the information provided in this document and to help you understand how we will communicate with you if this happens.

* These fees are regulated by Government. We reserve the right to increase fees in subsequent years of study in response to changes in government policy and/or changes to the law. If permitted by such change in policy or law, we may increase your fees by an inflationary amount or such other measure as required by government policy or the law. Please refer to the accompanying Student Terms & Conditions. Further information on fees can be found at <http://www.keele.ac.uk/studentfunding/tuitionfees/>

** These fees are for new students. We reserve the right to increase fees in subsequent years of study by an inflationary amount. Please refer to the accompanying Student Terms & Conditions for full details. Further information on fees can be found at <http://www.keele.ac.uk/studentfunding/tuitionfees/>

2. What is an Integrated Masters programme?

The Master's level programme described in this document allows you to focus exclusively on the study of Forensic Science. Integrated master's awards are delivered through a programme that combines study at a bachelor's degree with honours with study at master's level. As such, a student graduates with an integrated master's degree after a single four-year programme of study. The Integrated Masters programme described in this document allows graduates to gain enhanced skills and knowledge to master's level.

3. Overview of the Programme

The MSci Forensic and Analytical Investigation programme is accredited by the Chartered Society of Forensic Sciences. It has been designed to provide you with a complete understanding of the subject from the crime scene to the court so you are fully prepared for your future career. During your studies on this programme, you will cover areas such as forensic chemistry, anthropology, digital forensics and crime scene investigation to name a few. There is also the option to personalise your degree to your own particular interests or career aspirations by following one of our specialised pathways. These include, forensic chemistry, forensic biology, crime scene investigation and digital forensics. Employability is at the heart of this programme. In addition to tailoring your studies, you will gain a significant amount of hands on experience both in the crime scene and the laboratory. In addition to this, we offer additional certification in digital forensics and presenting evidence as an expert witness. These are offered by external specialist trainers and will provide you with something extra that you can add to your CV to impress potential employers.

You will gain hands-on practical experience with a [wide range of equipment and techniques](#) working with professional and research grade instrumentation. The teaching laboratories for forensic science are well equipped with high quality standard laboratory facilities and modern forensic science and analytical instrumentation. There are also dedicated crime scene simulation facilities which include both [domestic](#) and [non-domestic](#) indoor scenarios, and outdoor crime scenes, vehicle and [fire](#) examination and a dedicated [outdoor taphonomy facility](#) used for teaching and research projects. You will also gain experience by use of outdoor [Faculty equipment](#) which includes metal detectors, surveying, UAV drones and near-surface geophysical equipment, soil augers and sample preparation and analysis.

You will be taught by [academic staff](#) who are research active in the differing forensic science specialties and in developing forensic science education, as well as by specialist forensic science practitioners who have previously worked as crime scene investigators, forensic search specialists, digital forensics officers and in forensic science laboratories. This will prove particularly beneficial in your final year independent research project which is a highlight of your course. You will also have external guest lecturers providing you current knowledge and understanding in specialist areas throughout your studies. You will also be supported by an Academic Mentor throughout your course.

Forensic Science skills development and graduate attributes are embedded throughout the course, which include a wide range of transferrable skills, through extensive use of problem-based and team-based learning, ability to progress through forensic science investigations to produce professional reports and defend them in court, to research skills via the independent research project in year 3 and extended research project that you will undertake in the final year 4 of the programme, as well as the opportunity to go on work or education placements.

4. Aims of the programme

The broad aims of the programme are informed by the [QAA Benchmark Statement for Forensic Science](#), to satisfy the [Chartered Society of Forensic Science](#) Accreditation and to embed Keele [curriculum expectations and graduate attributes](#), which are under the following generic categories:

Academic Knowledge and expertise

- engender and develop an enthusiasm for forensic science and provide an intellectually stimulating and beneficial learning experience
- enable development of a deep academic **subject knowledge** and experience of **interdisciplinary experience** and techniques relevant to forensic science to master's level
- foster **critical thinking**, awareness of and engagement with current forensic science methods and techniques within forensic science, some of which are at, or informed by, the forefront of the discipline

Professional skills

- develop practical, analytical, **problem-solving** and **numeracy and data literacy** skills, exploring new approaches to solving problems, within forensic science, to master's level
- develop **digital readiness**, literate, written and oral reporting skills to a level appropriate to the professional forensic scientist and the ability to convey scientific outcomes to non-scientists
- engender a sound understanding of continuity of evidence and how the forensic crime scene, the laboratory and the court contribute to the forensic and legal process

- **research skills** of devising, planning, executing and reporting on an original investigation or research project within the discipline, both as an individual and as part of a team
- **reflective practice** and **career management**

Personal effectiveness

- develop **leadership**, **communication** and **time management** skills, **collaborate** as part of a team,
- become **adaptable**, **resilient**, **self-aware** and **empathetic** of others

Social and ethical responsibility

- recognise and respect **equality, diversity and inclusion**, acting **ethically** with **integrity and respect**
- developing **sustainability** knowledge and skills and aware of **global issues** and challenges.

5. What you will learn

The intended learning outcomes of the programme (what students should know, understand and be able to do at the end of the programme), can be described under the following headings:

- Subject knowledge and understanding
- Subject specific skills
- Key or transferable skills (including employability skills)

Subject knowledge and understanding

Successful students will be able to demonstrate knowledge and understanding of:

- the principles of forensic chemistry, analytical science, forensic biology, anthropology and taphonomy, crime scene investigation, explosives and arson
- selected topics in forensic anthropology and digital forensics and possess competence in applying these principles to appropriate areas of the discipline.
- a wide range of instrumental and other techniques relevant to forensic science and use them competently to analyse a range of relevant materials and with regard to quality assurance issues
- problem-solving within forensic science by drawing on their scientific understanding and knowledge, and experience of experimental techniques
- an awareness of and engagement with current methods and techniques within forensic science, some of which are at, or informed by, the forefront of the discipline
- the place of forensic science within the legal framework and the role of the expert witness in court
- the research literature across forensic science, use it to advance their understanding and apply it in practice
- the legal and ethical issues which constrain the practice of the professional forensic scientist

Subject specific skills

Successful students will be able to:

- execute practical work and critically analyse the results from experiments or investigations and draw valid conclusions.
- interpret and evaluate the significance of the results of a forensic investigation in the context of the circumstances of the crime, using appropriate statistical tools
- prepare a written statement of expert testimony and defend it under cross-examination in a court setting
- research, devise, plan, execute and report on an original investigation or research project within the discipline, both as an individual and as part of a team
- work safely in the laboratory and manage risk assessments and other practices in a competent fashion.
- select and utilise appropriate software, databases and other digital resources for the analysis and interpretation of instrumental and other laboratory data

Key or transferable skills (including employability skills)

Successful students will be able to:

- solve familiar, unfamiliar and complex problems with self-direction and originality, by clearly formulating the problem, identifying the key issues and generating different approaches to its solution
- analyse, synthesise and summarise data and information critically and appreciate its limitations
- assess the merits of contrasting theories, explanations and strategies
- make critical judgements by acquiring a range of evidence and information then formulating and testing hypotheses
- present complex concepts and information in a clear and concise manner, both orally, in writing and by other means and to interact and communicate effectively within a wide range of professional environments, including to non-scientific audiences

- work both independently and as part of a team, to plan, organise and perform work efficiently and conscientiously in a timely way, and meet appropriate deadlines
- take responsibility for their own learning and develop a habit of critical reflection upon that learning
- utilise a wide range of ICT skills, including the use of databases, software packages and modern methods of communication
- work within an ethical framework and according to ethical, honest and acceptable practices
- develop confidence in their own understanding and skills as well as a self-critical attitude to their own work and achievements
- develop an adaptable and flexible approach to study, work and work-life balance
- identify and work towards targets for ongoing professional development

Keele Graduate attributes

The Keele Graduate Attributes are the qualities (skills, values and mindsets) which you will have the opportunity to develop during your time at Keele through both the formal curriculum and also through co- and extra-curricular activities (e.g., work experience, and engagement with the wider University community such as acting as ambassadors, volunteering, peer mentoring, student representation, membership and leadership of clubs and societies). Our Graduate Attributes consist of four themes: **academic expertise, professional skills, personal effectiveness, and social and ethical responsibility**. You will have opportunities to engage actively with the range of attributes throughout your time at Keele: through your academic studies, through self-assessing your own strengths, weaknesses, and development needs, and by setting personal development goals. You will have opportunities to discuss your progress in developing graduate attributes with, for example, Academic Mentors, to prepare for your future career and lives beyond Keele.

6. How is the programme taught?

Our programme is delivered with an emphasis on live, in-person, interactive sessions, supported by online materials on the KLE allowing flexible engagement. The Keele University extensive campus provides an unrivalled grounds to offer an abundance of opportunities for specialist indoor and outdoor simulation, research projects and specialist equipment for students to utilise (see later). Students are also provided with regular opportunities to talk through particular areas of difficulty, and any special learning needs they may have, with their Academic Mentors or module lecturers on a one-to-one basis. You will also have some course optionality through module options throughout your studies allowing you to choose in areas such as forensic chemistry, forensic biology, crime scene investigation and digital forensics.

1st Year:

Academic content is predominantly taught through interactively through a mixture of interactive lectures and laboratory activities. Forensic Science is a laboratory-based discipline and practical work is closely tied to the lectures, thus enabling students to gain competence and confidence in the investigation and analysis of forensic evidence, using laboratory instrumentation as well as developing a critical awareness of the range of techniques available, their capabilities and limitations. Students working in the laboratory gain an understanding of health and safety issues, manage risk assessments, maintaining accurate and informative laboratory notes and working with others in a safe and productive fashion. In a similar way, through small-group, tutor-guided exercises and team-led investigations in indoor and outdoor simulated crime scenes, students apply the principles and procedures of crime scene investigation to novel incidents, develop practical skills and learn how to implement a forensic strategy and ensure a rigorous chain of custody.

2nd Year:

Teaching styles continue from first year with interactive lectures supported by problem classes, laboratory practicals, crime scene investigation sessions and tutorials. Practical classes include scripted laboratory sessions developing more advanced techniques and hands-on experience of a range of analytical instruments. Investigative group work is developed through an analytical project. Professional skills are developed with a focus on forensic science practical and theoretical knowledge to give you knowledge and understanding of these career-relevant skills. Choice is also available of different option modules, depending on your area(s) of interest.

3rd Year:

A highlight of our 3rd year is the independent research project. Rather than scripted labs, you will collaborate with an academic member of staff to develop and complete your project spread over both semesters. Laboratory work, if appropriate, takes place in both teaching labs or outdoors, depending on the chosen project, with expert supervision. Further practical work is taught through laboratory sessions and PC labs involving hands-on experience of a wide range of research grade analytical instruments. Fewer contact hours provide more time for independent work, and the ability to specialise in your preferred areas of forensic science and criminology through a series of assessment items allowing a bespoke choice of subject. Choice is also available of different option modules, depending on your area(s) of interest.

4th Year:

The main component of our 4th year is the independent research project. Here you will develop your research skills built in 3rd year to comprise a majority of your time on a chosen research project, with expert supervision. Your research project will be at the forefront of your discipline. You will have dedicated modules on Research Skills, with choice also available of different option modules, depending on your area(s) of interest.

Apart from these research activities, students are also provided with regular opportunities to talk through particular areas of difficulty, and any special learning needs they may have, with their Academic Mentors or module lecturers on a one-to-one basis. You are also invited to attend our Forensic Sciences Careers Series in which you will experience speakers from academia and industry presenting material at the forefront of current scientific knowledge and potentially where you can go with your Degree.

Apart from these formal activities, students are also provided with regular opportunities to talk through particular areas of difficulty, and any special learning needs they may have, with their Academic Mentors or module lecturers on a one-to-one basis.

These learning and teaching methods enable students to achieve the learning outcomes of the programme in a variety of ways.

7. Teaching Staff

The Forensic Science [academic staff](#) have expertise and interests across forensic sciences as well as outwith the programme. There are a number of additional guest lecturers from the profession who contribute either a single or a short series of lectures, workshops or practical classes across the programme in topics such as crime scene examination, fire scene investigation and forensic toxicology.

Most academic staff are active researchers in the forensic, analytical and chemical sciences and many have a distinguished track record in publication, the generation of grant income, industrial collaboration and as research journal reviewers. A strength of the programme lies in our specialist forensic science practitioners who bring their wealth of real-world experience and case work to the teaching of Forensic Science. We have experts who previously worked as crime scene investigators, digital forensics officers, or in accredited forensic science laboratories whose expertise informs current best practice in forensic science, and whose extensive contacts bring in outside experts to enhance the student experience and understanding of contemporary Forensic topics.

Several staff have particular interests in the development of teaching and learning methods within forensic science education and some are members of and active in the professional bodies for the forensic science. A number of staff are Fellows of the Higher Education Academy, have held Keele Teaching and Learning Awards and, within the School, several have been awarded the University Teaching Excellence Award. Additionally, the majority of staff contribute to widening participation and science outreach activities and have demonstrated innovation and good practice in teaching and learning to take into account the diverse needs of all students.

The University will attempt to minimise changes to our core teaching teams, however, delivery of the programme depends on having a sufficient number of staff with the relevant expertise to ensure that the programme is taught to the appropriate academic standard. Staff turnover, for example where key members of staff leave, fall ill or go on research leave, may result in changes to the programme's content. The University will endeavour to ensure that any impact on students is limited if such changes occur.

8. What is the structure of the Programme?

The academic year runs from September to June and is divided into two semesters. The number of weeks of teaching will vary from course to course, but you can generally expect to attend scheduled teaching sessions between the end of September and mid-December, and from mid-January to the end of April. Our degree courses are organised into modules. Each module is usually a self-contained unit of study and each is usually assessed separately with the award of credits on the basis of 1 credit = 10 hours of student effort. An outline of the structure of the programme is provided in the tables below.

There are two types of module delivered as part of your programme. They are:

- Compulsory modules - a module that you are required to study on this course;
- Optional modules - these allow you some limited choice of what to study from a list of modules.

Global Challenge Pathways

This programme includes the option for you to take a Global Challenge Pathway. These modules offer you an exciting opportunity to work with students and staff from different disciplines to explore topical global issues such as power and conflict, health inequalities, climate change, generative AI, social justice, global citizenship, and enterprise from different perspectives.

Global Challenge Pathways can either be taken as one 15-credit module at Levels 4, 5 and 6, or one 15-credit module at Levels 5 and 6. For more information about our Global Challenge Pathways please visit:

Modern Languages or Certificate in TESOL

Alternatively, you could choose to study modules with the University Language Centre. The Language Centre offers three pathways; The Language Specialist, The Language Taster, and The Trinity Certificate in Teaching English to Speakers of Other Language (TESOL). Language Centre modules are available separately for students at Level 4. At Levels 5 and 6 they are included within the Global Challenge Pathways.

If you choose the Language Specialist pathway, you will automatically be enrolled on a Semester 2 Modern Language module as a continuation of your language of choice as a faculty funded 'additional' module. Undertaking a Modern Languages module in Semester 2 is compulsory if you wish to continue to the Language Specialist Global Challenge Pathway the following academic year.

For more information about Language Centre option modules available to you please visit the following webpages.

For new (Level 4) students please visit: <https://www.keele.ac.uk/study/languagecentre/>

For current (Level 5 and Level 6) students please visit: <https://www.keele.ac.uk/students/academiclife/global-challenge-pathways/>

For further information on the content of modules currently offered, please visit:
<https://www.keele.ac.uk/recordsandexams/modulecatalogue/>

Year	Compulsory	Optional	
		Min	Max
Level 7	90	30	30

Module Lists

Level 7

At Level 7, students take 90 credits of compulsory modules. The remaining 30 credits may either be used to take optional modules listed below.

Compulsory modules	Module Code	Credits	Period
Forensic Research Skills	FSC-40045	15	Semester 1
MSci Forensic Research Project	FSC-40047	60	Semester 1-2
Major Scene Investigation: From Crime to Trial	FSC-40039	15	Semester 2

Optional modules	Module Code	Credits	Period
Marks and Traces Advanced Examination	FSC-40041	15	Semester 1
Forensic Analysis: From Academia to Industry	FSC-40043	15	Semester 1
Digital Forensics: Applications and Advanced Examinations	FSC-40055	15	Semester 1
Advanced Topics in Forensic Biology	FSC-40057	15	Semester 1
Contemporary Topics in Forensic Science	FSC-40051	15	Semester 1-2
Advanced Environmental and Wildlife Forensics	FSC-40029	15	Semester 2
Forensic Anthropology: Complex Scenes, Recovery and Analysis	FSC-40049	15	Semester 2

9. Final and intermediate awards

Credits required for each level of academic award are as follows:

Credits required for each level of academic award are as follows:

Master's Degree MSci Forensic and Analytical Investigation	480 credits	<p>You will require at least 120 credits at levels 4, 5, 6 and 7</p> <p>You must accumulate at least 360 credits in your main subject (out of 480 credits overall) to graduate with a named single honours degree in this subject.</p>
Honours Degree BSc (Hons) Forensic Science	360 credits	<p>You will require at least 120 credits at levels 4, 5 and 6</p> <p>You must accumulate at least 270 credits in your main subject (out of 360 credits overall), with at least 90 credits in each of the three years of study, to graduate with a named single honours degree in this subject</p>
Diploma in Higher Education	240 credits	<p>You will require at least 120 credits at level 4 or higher and at least 120 credits at level 5 or higher</p>
Certificate in Higher Education	120 credits	<p>You will require at least 120 credits at level 4 or higher</p>

International Year option: in addition to the above students must pass a module covering the international year in order to graduate with a named degree including the 'international year' wording. Students who do not complete, or fail the international year, will be transferred to the three-year version of the programme.

10. How is the Programme Assessed?

The wide variety of assessment methods used on this programme at Keele reflects the broad range of knowledge and skills that are developed as you progress through the degree programme. Teaching staff pay particular attention to specifying clear assessment criteria and providing timely, regular and constructive

feedback that helps to clarify things you did not understand and helps you to improve your performance. The following list is representative of the variety of assessment methods used on your programme:

- **Class tests** assess the understanding of concepts and the application of theories to solve familiar and unfamiliar problems. They also allow students to experience time-constrained assessment as well as acting to provide feedback on their progress
- **End of module examinations, open book assessments and case work portfolios** test the ability of the student to describe, explain, and critically discuss the principles of forensic science, and to demonstrate competence in applying these principles to applications and to solve problems from appropriate areas of the discipline
- **Problems sheets and data analysis exercises** assess the student's skills in solving numerical and other problems within forensic science by drawing on their scientific understanding and knowledge, and experience of experimental techniques
- **Group/Team Scenarios** - students work in teams or groups to investigate forensic scenarios and case studies, simulating the role of teamwork in the real world work of Forensic analysts.

Throughout the extensive laboratory and other practical work in this programme, many types of assessment are utilised to achieve the learning outcomes.

- **Laboratory portfolios** are used to communicate the results of work accurately and reliably and to encourage good working practice, including managing risk assessments and following safe working practices. Together with laboratory proformas, they allow students to demonstrate their skills in the critical analysis and interpretation of data, test the uncertainty in knowledge and show the ability to draw valid conclusions from their work
- **Laboratory reports** communicate the execution of practical work, the ability to describe the results of work accurately and reliably, with structured and coherent arguments and to enable students to evaluate the outcomes of data analysis in a critical fashion
- **Court expert witness statements** enable students to prepare a written statement of expert testimony and to understand the place of forensic science within the legal framework and the role of the expert witness in court. These reports test the student's ability to interpret and evaluate the significance of the results of a forensic investigation in the context of the circumstances of the crime, using appropriate statistical tools
- **Oral presentations, digital presentations and poster presentations** demonstrate the ability of the student to present complex concepts and information in a clear and concise manner, to interact and communicate effectively to a wide range of professional environments, including to both scientific and non-scientific audiences
- **Crime scene investigation and strategic forensic reports** enable students to apply the principles and procedures for crime scene investigation to a scenario, to critically review data and outcomes in light of the chain of custody for evidence and the appropriate forensic strategy, to make critical judgments and to present in a clear and concise manner
- **Essays** and the production of **technical leaflets** enable students to analyse, synthesise and summarise data and information critically, to appreciate its limitations, to assess the merits of contrasting theories, explanations and strategies and to present, in writing, complex concepts and information in a clear and concise manner
- **Dissertation and research paper / literature / critical reviews** enable the student to demonstrate their effective engagement with the research literature across forensic and analytical science and use it to advance their understanding. In this way, the assessment may test their awareness of, and engagement with, current methods and techniques within the forensic and analytical sciences, some of which are at, or informed by, the forefront of the discipline. The assessment enables the student to present complex concepts and information in a clear and concise manner in writing, and to communicate effectively to a wide range of scientific and professional environments
- **Project plans, project presentations and examinations** test the student's skills in working both independently and as part of a team, in planning, organising and carrying out practical and other work efficiently, including making appropriate ethical assessments, and meeting appropriate deadlines
- **Project reports** demonstrate how the student has taken responsibility for their own learning, has critically assessed a wide range of techniques and methodologies relevant to the forensic and analytical sciences and used them competently to analyse relevant materials and has selected and utilised appropriate software, databases and other digital resources for the analysis and interpretation of laboratory data. The report also tests the student's achievement in presenting complex concepts and information in a clear and concise manner in writing and communicating effectively to a scientific audience
- **Presentation and cross-examination** assessments test the student's ability to interpret and evaluate the significance of the results of a forensic investigation in the context of the circumstances of the crime, to demonstrate their understanding of the place of forensic science within the legal framework and the role of the expert witness in court and test their ability to defend a written witness statement under cross-examination in a court setting

Through working on a diverse range of assessments, linked to a curriculum that is in its latter stages closely based around the professional forensic science context, the student will demonstrate confidence in their own understanding and skills as well as a self-critical attitude to their own work and achievements, an adaptable and

flexible approach to study, work and work-life balance and the ability to identify and work towards targets for ongoing professional development.

Marks are awarded for summative assessments designed to assess your achievement of learning outcomes. You will also be assessed formatively to enable you to monitor your own progress and to assist staff in identifying and addressing any specific learning needs. Feedback, including guidance on how you can improve the quality of your work, is also provided on all summative assessments within three working weeks of submission, unless there are compelling circumstances that make this impossible, and more informally in the course of tutorial and seminar discussions.

Although there are some explicit formal exercises providing formative assessment throughout the programme, the majority of formative assessment and feedback is generated informally through a variety of tutor-led activities. For example:

- Tutor-led comments on the work in the laboratory notebook or on calculations encountered in data analysis during laboratory classes
- Tutor feedback and advice on calculations undertaken during problems classes
- Tutor-led discussions on project plans, literature reviews and project results during viva interviews
- Written formative feedback on non-summative laboratory work
- Written formative feedback provided from the tutor reading a draft of a major piece of work such as the dissertation or a project report

11. Contact Time and Expected Workload

This contact time measure is intended to provide you with an indication of the type of activity you are likely to undertake during this programme. The data is compiled based on module choices and learning patterns of students on similar programmes in previous years. Every effort is made to ensure this data is a realistic representation of what you are likely to experience, but changes to programmes, teaching methods and assessment methods mean this data is representative and not specific.

Undergraduate courses at Keele contain an element of module choice; therefore, individual students will experience a different mix of contact time and assessment types dependent upon their own individual choice of modules. The figures below are an example of activities that a student may expect on your chosen course by year stage of study. Contact time includes scheduled activities such as: lecture, seminar, tutorial, project supervision, demonstration, practical classes and labs, supervised time in labs/workshop, fieldwork and external visits. The figures are based on 1,200 hours of student effort each year for full-time students.

Activity

	Scheduled learning and teaching activities	Guided independent Study	Placements
Year 1 (Level 4)	24%	76%	0%
Year 2 (Level 5)	29.5%	70.5%	0%
Year 3 (Level 6)	32.9%	67.1%	0%
Year 4 (Level 7)	17.2%	82.8%	0%

12. Accreditation

This programme carries full accreditation status from The Chartered Society of Forensic Sciences. Further details on the accreditation requirements for these programmes can be found on the society web page below.

The Chartered Society of Forensic Sciences accreditation web page: <http://www.csofs.org/Accreditation>

13. University Regulations

The University Regulations form the framework for learning, teaching and assessment and other aspects of the student experience. Further information about the University Regulations can be found at: <http://www.keele.ac.uk/student-agreement/>

14. Other Learning Opportunities

Study Abroad (International Year)

A summary of the International Year, which is a potential option for students after completion of year 2 (Level 5), is provided in the Annex for the International Year.

15. Additional Costs

Activity	Estimated Cost
<p>Equipment - All PPE equipment (laboratory coats and glasses) are provided by the School at no cost to the student. Students will be required to have two laboratory notebooks, these are provided at no cost to the student in the induction session and can be used for multiple modules/years. Replacement items are available from the School Stores, the 2024/25 price for these are listed below:</p> <p>Laboratory Book - £1.50 Laboratory Glasses - £3.50 Laboratory Coat - £13</p> <p>Students will be required to supply appropriate writing equipment but this would be a minimal (<£10) cost. All core textbooks are available in the main University Library. To increase the availability of these resources, eBooks are also purchased alongside the printed text where available; these can be accessed through the University Library Catalogue. Additional costs may be incurred if the student wishes to purchase any book for themselves. In general we only recommend they purchase the core textbook which is available for approximately £50.</p>	£60

These costs have been forecast by the University as accurately as possible but may be subject to change as a result of factors outside of our control (for example, increase in costs for external services). Forecast costs are reviewed on an annual basis to ensure they remain representative. Where additional costs are in direct control of the University we will ensure increases do not exceed 5%.

As to be expected there will be additional costs for inter-library loans and potential overdue library fines, print and graduation. We do not anticipate any further costs for this programme.

16. Annex - International Year

Forensic Science with International Year

International Year Programme
<p>Students registered for Forensic and Analytical Investigation programme may either be admitted for or apply to transfer during their period of study at Level 5 to the International Year programme, providing that they meet the progression criteria outlined in this document. Students accepted onto the International Year programme will have an extra year of study at an international partner institution after they have completed Year 2 (Level 5) at Keele.</p> <p>Students who successfully complete both the second year (Level 5) and the International Year will be permitted to progress to Level 6. Students who fail to satisfy the examiners in respect of the International Year will normally revert to the MSci Forensic and Analytical Investigation and progress to Level 6 on that basis. The failure will be recorded on the student's final transcript.</p> <p>Study at Level 4, Level 5, Level 6 and Level 7 will be as per the main body of this document. The additional detail contained in this annex will pertain solely to students registered for 'Forensic and Analytical Investigation with International Year'.</p> <p>Study at Level 4, Level 5, Level 6 and Level 7 will be as per the main body of this document. The additional detail contained in this annex will pertain solely to students registered for the International Year option</p>
International Year Programme Aims

In addition to the programme aims specified in the main body of this document, the international year programme of study aims to provide students with:

1. Personal development as a student and a researcher with an appreciation of the international dimension of their subject
2. Experience of a different culture, academically, professionally and socially

Entry Requirements for the International Year

Students may apply to the 5-year programme during Level 5. Admission to the International Year is subject to successful application, interview and references from appropriate staff.

The criteria to be applied are:

- Academic Performance (an average of 55% across all modules in Semester 1 at Level 5 is normally required. Places on the International Year are then conditional on achieving an average mark of 55% across all Level 5 modules. Students with up to 15 credits of re-assessment who meet the 55% requirement may progress to the International Year. Where no Semester 1 marks have been awarded performance in 1st year marks and ongoing 2nd year assessments are taken into account)
- General Aptitude (to be demonstrated by application for study abroad, interview during the 2nd semester of year 2 (Level 5), and by recommendation of the student's Academic Mentor, 1st and 2nd year tutors and programme director)

Student Support

Students will be supported whilst on the International Year via the following methods:

- Phone or Teams conversations with Study Abroad tutor, in line with recommended Academic Mentoring meeting points.
- Support from the University's Global Education Team

Learning Outcomes

In addition to the learning outcomes specified in the main text of the Programme Specification, students who complete a Keele undergraduate programme with International Year will be able to:

1. Describe, discuss and reflect upon the cultural and international differences and similarities of different learning environments
2. Discuss the benefits and challenges of global citizenship and internationalisation
3. Explain how their perspective on their academic discipline has been influenced by locating it within an international setting.
4. Reflect upon the international nature of crime and describe and discuss differences between investigative approaches taken in different countries.
5. Evaluate the merits and limitations of the different approaches taken to investigating crime in different countries.
6. Apply their experiences abroad to the specific graduate attributes associated with their Forensic Science degree.

These learning outcomes will all be assessed by the submission of a satisfactory individual learning agreement, the successful completion of assessments at the partner institution and the submission of the reflective portfolio element of the international year module.

Regulations

Students registered for the International Year are subject to the programme-specific regulations (if any) and the University regulations. In addition, during the International Year, the following regulations will apply:

Students undertaking the International Year must complete 120 credits, which must comprise *at least 40%* in the student's discipline area.

This may impact on your choice of modules to study, for example you will have to choose certain modules to ensure you have the discipline specific credits required.

Students are barred from studying any module with significant overlap to the Level 6 modules they will study on their return. Significant overlap with Level 5 modules previously studied should also be avoided.

Additional costs for the International Year

Tuition fees for students on the International Year will be charged at 15% of the annual tuition fees for that year of study, as set out in Section 1. The International Year can be included in your Student Finance allocation, to find out more about your personal eligibility see: www.gov.uk

Students will have to bear the costs of travelling to and from their destination university, accommodation, food and personal costs. Depending on the destination they are studying at additional costs may include visas, study permits, residence permits, and compulsory health checks. Students should expect the total costs of studying abroad be greater than if they study in the UK, information is made available from the Global Education Team throughout the process, as costs will vary depending on destination.

Students who meet external eligibility criteria may be eligible for grants as part of this programme. Students studying outside of this programme may be eligible income dependent bursaries at Keele.

Students travel on a comprehensive Keele University insurance plan, for which there are currently no additional charges. Some Governments and/or universities require additional compulsory health coverage plans; costs for this will be advised during the application process.

17. Annex - Programme-specific regulations

Programme Regulations: MSci Forensic and Analytical Investigation

Final Award and Award Titles	MSci Forensic and Analytical Investigation MSci Forensic and Analytical Investigation with International Year
Intermediate Award(s)	BSc Honours Diploma in Higher Education Certificate in Higher Education
Last modified	October 2024
Programme Specification	https://www.keele.ac.uk/qa/programmespecifications

The University's Academic Regulations which can be found on the Keele University website (<https://www.keele.ac.uk/regulations/>)[1] apply to and regulate the programme, other than in instances where the specific programme regulations listed below over-ride them. These programme regulations list:

- *Exemptions* which are characterised by the omission of the relevant regulation.
- *Variations* which are characterised by the replacement of part of the regulation with alternative wording.
- *Additional Requirements* which set out what additional rules that apply to students in relation to this programme.

The following **exemptions, variations** and **additional requirements** to the University regulations have been checked by Academic Services and have been approved by the Faculty Education Committee.

A) EXEMPTIONS

The clause(s) listed below describe where an exemption from the University's Academic Regulations exists:

For the whole duration of their studies, students on this Programme are exempt from the following regulations:

- **No exemptions apply.**

B) VARIATIONS

Variation 1: Coursework Assessment

Failure to engage appropriately with a module's coursework assessment items without good cause (that is, by failing to submit more than 50% of coursework items) may result in reassessment being denied.

Variation 2: Level 4 to Level 5 Progression

In order to progress from level 4 to level 5, students must pass the following core forensic science modules: FSC-10001, FSC-10003 and FSC-10005. Students with outstanding reassessment attempts on assessments in these modules may not progress before these assessments have been completed. At the discretion of the School of Chemical and Physical Sciences local board, this may be discounted.

Additional Requirements

The programme requirements listed below are in addition to the University's Academic Regulations:

Additional requirement 1: Practical Classes

1. Practical classes are compulsory and are an essential part in fulfilling the intended learning outcomes of modules of which they are part, and a requirement of Chartered Society of Forensic Science accreditation. Over a semester, failure to attend >70% of the laboratory/practical classes without approval, may result in failure of the relevant modules with no reassessment being offered. In addition, students must meet any ILOs related to practical sessions in each module, where appropriate. Failure to attend laboratory/practical sessions in a given module, without approval, may result in failure of the relevant modules with no reassessment being offered.

2. Any student failing to follow the health and safety guidelines in the laboratory will be asked to leave. This may include inappropriate dress, refusal to follow reasonable requests of staff, late attendance resulting in missed safety briefings, or attending under the influence of alcohol or other substances. The student will not be permitted to make up the missed session.

3. There is no opportunity to make up missed practical sessions due to timetable constraints and so the following concessions will be made available to the student:

- the student may be given opportunity to submit assessed work based on an alternative practical session, in agreement with the module leader; with the approval of the Chemical and Physical Sciences Local Module Board, a small element of the laboratory assessment (up to 33%) may be disregarded with the final mark for the assessment being recalculated from the remaining elements.

Additional requirement 2: Transferring from another institution

Any student who is wishing to transfer to this programme from another institution, at Level 5 or above, must demonstrate that they have transferred from a programme that is accredited by The Chartered Society of Forensic Sciences. If the original programme is not accredited the student must demonstrate that they have covered the same material in their Level 4 year as would be covered at Level 4 on this programme.
