

## Prognostic AND Diagnostic Assessment of Shoulder Pain

### Keele Clinical Trials Unit

remains open and operational during the latest lockdown

**Happy New Year** to all our Practices! Although Christmas seems a dim and distant memory, we hope you managed to have a break

400

**Thank you** for your continued support in identifying potential participants to the PANDA-S study! **234** have now been recruited overall!

The PowerPoint slide deck used in training has been updated with a voice-over. Please let us know if you would like a copy for any new staff or as **refresher training**

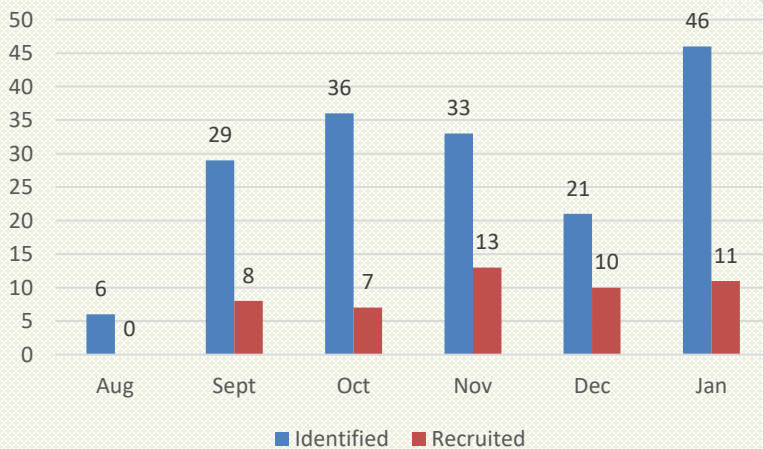

**First Contact Practitioners** can identify eligible patients for the study in the same way GPs do

We are confident that all **pop-up problems** have now been resolved, but if you do have any issues, please let us know.

Identification and recruitment remain challenging, but every participant is important and will contribute to improving the management of shoulder pain
